

LM Envision Observability User Training

Course Overview

This one-day instructor-led training course is designed to provide participants with an overview of the LM Envision platform and its features. Through demonstrations and hands-on activities within their own LM Envision environment, participants will gain practical experience using the platform to support their own unique roles and responsibilities within their organization.

Course Level

This course is suitable for new users with no previous experience using LM Envision.

Audience

System administrators, network administrators, database administrators, and anyone who may utilize LM Envision as read-only users.

Duration

1 day

Prerequisites

- An existing LM Envision platform.
- Students would highly benefit from a basic understanding of general IT terms, system administration, and networking.
- Getting Started with LogicMonitor eLearning series is recommended.
- Completion of LogicMonitor Certified Associate exam may also be beneficial but is not required.

Objectives

- Identify the different components of the LM Envision platform
- Locate and interpret the Resources page
- Locate and interpret contents of the Alerts page
- Develop competence in building and managing new alerts
- Develop competence in building, automating, and sharing dashboards and reports
- Understand available options for ongoing support and guidance from LM Technical Support
